Blindness and Low Vision Support Group: February 18, 2026

At our November 2025 support group meeting, we introduced a variety of smartphone accessibility tools that support everyday tasks such as reading text, object recognition, navigation, and hands-free use. We're excited to build on this with a Part 2, hands-on session.

Before we meet again, we encourage you to:

- Try out some of the apps and features we discussed
- Choose one or two tools you'd like to explore more deeply or set up with support

This February Meeting:

Our guest speakers, **Dr. James Coughlan, Ph.D**. and **Dr. Nasif Zaman, Ph.D.**, will give a brief overview of smartphone accessibility features, with demonstrations and discussion relevant to both Apple (iOS) and Android devices.

Please bring:

- The devices you use (phones and/or tablets)

- One or two tasks or activities you would like to explore

- Any specific items (for example, a mailed letter or document) that you would like to use for hands-on practice during the session

In-person attendance is strongly encouraged, as hands-on learning and individualized support are best facilitated in person. A Zoom option will also be available for those who prefer to follow along remotely and ask questions.
